

UNIVERSITY OF CALICUT

(Abstract)

Scheme and Syllabus of M.Sc.Botany (1st Semester) of affiliated colleges under Credit Semester System (CUCSS-PG-2010) implemented with effect from 2010 admission-orders issued.

GENERAL & ACADEMIC BRANCH-IV 'J' SECTION

No. GA IV/J1/4765/2006

Dated, Calicut University PO, 30.07.2010.

Read: 1. U.O.No.GAIV/J1/1373/08 dated 23.07.2010.

2. Minutes of the meeting of the Board of Studies in Botany (PG) of 19.06.2010.

3. Orders of the Vice-Chancellor, in the file of even number dated 29.07.2010.

O R D E R

As per paper read as (1) above, Credit Semester System at Post Graduate level in affiliated colleges (CUCSS-PG-2010) has been implemented from the Academic year 2010 onwards.

The Board of Studies at its meeting, vide paper read as (2) above, discussed the scheme and syllabus of Botany (PG) of affiliated colleges and has forwarded the scheme and syllabus of 1st Semester to the University.

The Vice-Chancellor, in view of exigency, has approved the minutes of the meeting of the Board, subject to ratification by the Academic Council vide paper read as 3 above.

Sanction has therefore been accorded to implement the scheme and syllabus of M.Sc.Botany (1st Semester) of affiliated colleges under Credit Semester System with effect from 2010 admission.

Orders are issued accordingly. Scheme and Syllabus appended.

SECTION OFFICER

UNIVERSITY OF CALICUT
M.Sc. BOTANY PROGRAMME (CSS)

Admission:

The norms of admission as per the existing university regulations will be followed.

Duration of the Course:

Four semesters (2 years)

Number of courses and credits required:

Ist, IInd and IIIrd semesters with four core courses (three theory and one practical), each with 4 credits (total 16 credits per semester) and IV semester with four elective courses (two theory and two practical) each with 4 credits, one dissertation with 4 credits and one viva voce with 4 credits (total 24 credits in the semester). Total credits required for the completion of the programme is $16 \times 3 + 1 \times 24 = 72$.

Selection of subject for dissertation:

A subject is to be selected by each student for dissertation based on the facilities available and the specializations of the supervising teachers.

Evaluation:

Evaluation is to be carried out both by internal continuous evaluation and external terminal evaluation. Out of the total weightage for each course, 25% is to be given for internal continuous evaluation and 75% for external terminal evaluation.

1. Internal continuous evaluation:

Internal continuous evaluation should have five components of equal weightage as shown below. Internal evaluation will be carried out by the teacher/ teachers offering the course. The marks should be displayed on the notice board of the department and the students shall be given a chance to redress grievances if any.

a. Theory courses:

Attendance	Assignments	Test paper (1)	Seminar	Test paper (2)
90%: full weightage	A: full weightage	A: Full weightage	A: full weightage	A: full weightage
80%: $\frac{3}{4}$ weightage	B: $\frac{3}{4}$ weightage	B: $\frac{3}{4}$ weightage	B: $\frac{3}{4}$ weightage	B: $\frac{3}{4}$ weightage
75%: $\frac{1}{2}$ weightage	C: $\frac{1}{2}$ weightage	C: $\frac{1}{2}$ weightage	C: $\frac{1}{2}$ weightage	C: $\frac{1}{2}$ weightage
Below 75%: no weightage	D: no weightage	D: no weightage	D: no weightage	D: no weightage

b. Practical courses:

Attendance	Practical skill	Test paper (1)	Drawing skill and regularity	Test paper (2)
90%: full weightage	A: full weightage	A: full weightage	A: full weightage	A: full weightage
80%: $\frac{3}{4}$ weightage	B: $\frac{3}{4}$ weightage	B: $\frac{3}{4}$ weightage	B: $\frac{3}{4}$ weightage	B: $\frac{3}{4}$ weightage
75%: $\frac{1}{2}$ weightage	C: $\frac{1}{2}$ weightage	C: $\frac{1}{2}$ weightage	C: $\frac{1}{2}$ weightage	C: $\frac{1}{2}$ weightage
Below 75%: no weightage	D: no weightage	D: no weightage	D: no weightage	D: no weightage

c. Dissertation:

Regularity	Involvement/ level of knowledge	Literature collection	Presentation (1)	Presentation (2) (model)
90%: full weightage	A: full weightage	A: full weightage	A: full weightage	A: full weightage
80%: $\frac{3}{4}$ weightage	B: $\frac{3}{4}$ credits	B: $\frac{3}{4}$ weightage	B: $\frac{3}{4}$ weightage	B: $\frac{3}{4}$ weightage
75%: $\frac{1}{2}$ weightage	C: $\frac{1}{2}$ credits	C: $\frac{1}{2}$ weightage	C: $\frac{1}{2}$ weightage	C: $\frac{1}{2}$ weightage
Below 75%: no weightage	D: no credits	D: no weightage	D: no weightage	D: no weightage

BO04EP16	Practicals of Elective II	25%	75%	4
BO04DN17	Dissertation	25%	75%	4
BO04VV18	Viva voce	0%	100%	4
Total				72 credits

CT01. PHYCOLOGY, BRYOLOGY, PTERIDOLOGY AND GYMNOSPERMS (1.5+1+2+1.5 = 6 hours per week)

Phycology

1. Classification of Algae-comparative Survey of important systems - Fritsch-Smith-Round. Criteria for algal classification-Phylogenetic considerations.
2. Biological importance of Planktons.
3. Algal cytology-Basic ideas of cell features-Electron microscopic studies of algal cell, cell wall, flagella, chloroplast, pyrenoid, eyespot- their importance in classification.
4. Reproduction-Different types of life cycles in algae.
5. General account of energy sources and pigments in algae.
6. Economic importance of algae-Roll of algae in soil fertility, algae in industry-Biological importance of phytoplanktons and water blooms.
7. General account of thallus structure, cell ultra-structure, reproduction, relationships and evolutionary trends in the following groups: Chlorophyta, Xanthophyta, Bacillariophyta, Phaeophyta, Rhodophyta.

1. Fritsch, F.E. The structure and Reproduction of Algae.
2. Smith, G.M. Manual of Phycology
3. Round, F.E, The Biology of Algae.
4. Pold and Wyane. Introduction of Algae.

Bryology

1. General characters and systems of classifications of Bryophytes
2. General account of the anatomy, reproduction, life history and phylogeny of Sphaerocarpaceae, Marchantiales, Jungermanniales, Calobryales, Anthocerotales, Sphagnales, Andreales, Funariales and Polytrichales
3. Origin and evolution of Bryophytes- gametophytic and sporophytic.
4. A general account of fossil Bryophytes and their affinities.
5. Economic importance of Bryophytes.

References

1. Watson E.V. The structure and life of Bryophytes. Hutchinson Univ. Press, London.

8. Manju C. Nair, K.P. Rajesh and Madhusoodanan P.V. Bryophytes of Wayanad in Western Ghats. Malabar Natural History Society, Kozhikode.

Pteridology

1. General characters and life history of Pteridophytes.
2. Cytology of Pteridophytes- Chromosome number and polyploidy.
3. Structure and evolution of stele in Pteridophytes.
4. Origin and evolution of Sporangium.
5. Heterospory and seed habit.
6. Development and evolutionary trends in the Gametophytes of Pteridophytes.
7. Apogamy, Apospory and Parthenogenesis.
8. Classification of Pteridophytes: Holttum, Pichi-Sermolli.
9. Comparative morphology, ecology and phylogeny of the following:
 - a) Psilopsida : Rhyniales, Psilophytales and Psilotales
 - b) Lycopsidea: Lycopodiales and Isoetales
 - c) Sphenopsida: Hyeniales, Pseudobomiales, Sphenophyllales, Calamitales and Equisetales.

- d) Filicopsida: General account: Primofilicales, Ophioglossales, Marattiales, Osmundales, Schizaeales, Cyatheales, Gleicheniales, Marsileales and Salviniaceae.
10. Economic importance of Pteridophytes-Medicinal, Horticulture, Biofertilizer, weeds.
11. General account of the contribution of Indian pteridologists.

Gymnosperms

1. Geological time scale and correlated predominant Gymnosperm flora.
- Classification of Gymnosperms- Chamberlain's system.
2. Geological horizons. Distribution, morphology, anatomy, reproduction and interrelationship of the following orders (Study of families and types not required)
 - a. Pteridospermales; b. Glossopteridales; c. Caytoniales; d. Cycadaeoidales; e. Pentoxylales; f. Cycadales, g. Ginkgoales; h. Cordaitales; i. Coniferales; j. Taxales; k. Ephedrales; l. Welwitschiales; m. Gnetales
3. Phylogenetic relationship of Gymnosperms.
4. Economic importance of Gymnosperms

CT02: MYCOLOGY & LICHENOLOGY, MICROBIOLOGY AND PLANT PATHOLOGY (2.5+2.5+1= 6 hours per week)

Mycology

1. General characters of Fungi: cell-ultra structure, unicellular and multicellular organization, hyphal growth, cell wall composition, nutrition (saprobic, biotrophic, symbiotic, predacious) reproduction (vegetative, asexual, sexual), heterothallism, parasexuality.
2. Classification of fungi by Ainsworth & Bisby (1983), Alexopoulos et al. (1996)- Phylogeny of fungi- Characters used in classification.
3. General account of Myxomycota, Mastigomycota, Zygomycota, Ascomycota, Basidiomycota and mitosporicfungi. Different kinds of spores and their dispersal.

4. Fungi as saprophytes: details of the fungal decomposition of organic matter, coprophilous fungi, lignin degrading fungi, role of fungi in degradation of pesticides.
5. Fungi as symbionts: Mycorrhiza – ectotrophic, orchidaceous and Ericoid mycorrhiza, Vesicular Arbuscular Mycorrhiza - their distribution and significance. Endophytes.
6. Lichenology: General account and systematics of lichens, thallus structure, reproductive bodies, ecological significance and economic importance of lichens.

Microbiology

1. Introduction - main groups of microorganisms and their characteristics -prions, viroids, viruses, bacteria, mycoplasmas and actinomycetes.
2. Bacteria - classification based on Bergey's Manual. Archaeobacteria and Eubacteria. Morphology, ultra-structure, nutrition, genetics
3. Plasmids and their characterization.
4. Cyanobacteria- salient features, morphology, ultrastructure, classification and economic importance.
5. Viruses- General account of plant and animal viruses, bacteriophages and their classification. Isolation, purification, infection, replication and transmission of plant viruses. Detailed study of TMV and T4 Phage.
6. Microbial ecology- microbiology of rhizosphere and phylloplane. Sewage disposal, bioremediation and water purification. Detection of microbes in air and water.
7. Agricultural microbiology - management of agricultural soils, biofertilizers, biopesticides.
8. Food Microbiology - Food spoilage and preservation methods. Microbiology of fermented food - dairy products, bread and other fermented plant products. Microorganisms as source of food- single cell protein.
9. Industrial Microbiology - Production of alcohol, vinegar, antibiotics, vitamins, steroids, vaccines, organic acids, amino acids.

Plant Pathology

1. Principles of Plant Pathology- Causal agents of plant diseases - Biotic causes (fungi, bacteria, virus, mycoplasma, nematodes, angiospermic parasites. Abiotic causes (nutrient and mineral deficiencies, effect of pollution). Koch's postulates. Latrogenic diseases. Seed pathology.
2. Details of different symptoms of plant diseases.
3. Process of infection- mechanical, physiological and enzymatic action. Penetration and entry of pathogens in to host tissue.
4. Host- parasite interaction. Enzymes and toxins in pathogenesis. Defense mechanisms in plants (structural and biochemical).
5. Details of different ways of spread and transmission of plant diseases- wind and water-mediated, seed borne and vector borne.
6. Plant disease management- exclusion, eradication and protection. Different pesticides and fungicides and their application. Biocides in plant protection.
7. Study of the following diseases with reference to the symptoms, causal organisms, disease cycle and control measures:
Bunchy top of banana, Bacterial blight of paddy, Bud rot of coconut, Mahali of Arecanut, Powdery mildew of rubber, Abnormal leaf fall of rubber, tikka disease of Ground nut, Late blight of potato, Blister blight of tea, wheat rust, coffee rust, grey leaf spot of coconut, Phytophthora foot rot of pepper, rhizome rot of ginger and turmeric, angiospermic parasites-Viscum, Dendrophthoe.

CT03. ANGIOSPERM ANATOMY, ANGIOSPERM EMBRYOLOGY, PALYNOLOGY & LAB TECHNIQUES (2+2+1+1= 6 hours per week)

Angiosperm Anatomy

1. Cell wall and its development. Chemistry of cell wall- cellulose, hemicellulose, polysaccharides, cell wall proteins, water. Organisation of primary wall. Cytokinesis and growth. Plasmodesmata. Secondary wall chemical constituents- lignin, suberin, callose; organisation of secondary wall.
2. Node - nodal patterns: Unilacunar, trilacunar, multilacunar and split lateral. Phylogenetic considerations. Leaf trace and branch trace- origin, departure; effect on stele and pith. Secondary growth in leaf traces.
3. Cambium: Development of vascular cambium and cork cambium in root and stem; cell types in vascular cambium, infected vascular cambium, seasonal variations in cambial activity; role of cambium in wound healing and grafting. Conversion of fusiform initials in to ray initials; cambium in arborescent monocotyledons (Liliiflorae).
4. Development and differentiation: The structure of specialized cells. Vascular differentiation (procambium, residual meristem, interfascicular and intrafascicular cambium); acropetal and basipetal differentiation in leaves, stem and roots. Sieve tube differentiation. Control of phloem differentiation. Tracheary elements differentiation. Ultra structure of phloem and xylem, brief account of transfer cells. Secondary wall thickening, cytoplasmic changes and autolysis. Control of differentiation. Genetic aspects- Induction of vessel elements. Induction of secondary xylem structure in relation to function in water conduction.

5. Anomalous secondary growth: Concepts; modification of the common type of vascular cambium, unequal activity of the vascular cambium. Successive cambia. Anomalous placement of vascular cambium. Discontinuous, unidirectional and bidirectional activity of cambium. Anomalous secondary growth in storage roots (Beet root, sweet potato).
6. Seedling anatomy: Concepts: anatomy of cotyledons, hypocotyl, seedling root, mesocotyl differentiation
7. Leaf anatomy: Unifacial, bifacial and centric leaf (onion); structure of epidermis, stomatal types; foriar sclerieds; oil cells; crystal idioblasts.
8. Anatomy in relation to taxonomy.
9. Wood anatomy- general account.

Angiosperm Embryology

1. Introduction to angiosperm embryology - structure of dithecos and monotheos anther.
2. Microsporogenesis: Structure and function of wall layers, role of tapetum in pollen development
3. Male gametophyte: Pollen mitosis, division of generative cells, heterospor.
4. Megasporogenesis: Megaspore triad, dyad, coenomegaspore.
5. Embryo sac - different types- ultra-structure of components- synergid and antipodal. Theories of the morphological nature of embryo sac
6. Pollination -Artificial pollination - ultra-structural and dis-ultrastructural and histo-chemical sigma. Significance of pollen - pistil interaction. Role of pollen wall proteins and stigma. In vitro pollination and fertilization.
7. Fertilization: Role of synergids - filiform apparatus, heterospermy and triple fusion.
8. Structure and development of typical dicot and monocot embryos- structure and function of suspensor.
9. Endosperm: classification and type- ruminant endosperm- mosaic endosperm- endosperm haustoria - physiology and cytology of endosperm.
10. Polyembryony - classification – practical value.
11. Apomixis - general account, genetics of apomixis.
12. Parthenocarpy -seedless fruits
13. Experimental embryology-embryo culture, anther culture, ovule culture.
14. Embryology in relation to taxonomy.

Palynology

1. Introduction- contributions of Erdtman and P K K Nair.
2. Development and structure of pollen wall. Pollen morphology and its application. Pollen evolution
3. Aero-palynology- methods of aerospore survey and analysis
4. Melittopalynology- nutritional and medical value of honey- unifloraland multifloral honey.
5. Recent advances in palynological studies- forensic-pollen allergy-oil exploration-paleopalynology.

6. Palynology in relation to taxonomy- eurypalynous and stenopalynous taxa.

References:

1. Sripad N. Agashe. Palynology and its Application.

Laboratory Techniques

1. Study of the following instruments - their uses and principles:
 - a. Microscope: microscopic measurements - camera lucida, micrometry.
 - b. Microtomes- Sledge, Rocking, Rotary.
2. Killing, fixing and staining of plant tissues:
 - a. Important reagents and chemicals used in the preparation of fixatives and their properties.
 - b. Fixatives - FAA, Carnoy's fluid, chrome acetic, Nawaschins fluid, Craf, Flemings- composition, preparation and specific uses.
 - c. Dehydrating agents, clearing agents, mounting media. Examples and brief description.
 - d. Stains - classification, composition and specific uses - safranin, crystal violet, cotton blue, fast green, Orange - G, hematoxylin, carmine.
 - e. Brief account of vital staining.
 - f. Staining techniques - Double staining.
 - i. Saffranin - Fast green
 - ii. Crystal violet – Orange G
 - iii. Methods of embedding plant materials in paraffin wax - TBA method; embedding for Electron microscopy.
 - iv. Sectioning of embedded paraffin wax materials using Rotary Microtome.
 - v. Double staining of microtome serial sections embedding in paraffin wax - Saffranin - fast green; Crystal violet - Orange G / Erythrosin.
 - vi. Whole mounts - general account
 - vii. Maceration, smears
 - viii. Histochemical tests –
 - (1) PAS Test - insoluble polysaccharides.
 - (2) Sudan black -lipids
 - (3) Fuelgen reaction - Nucleic Acids.

5. K.V. Krishnamurthy. Methods in Plant Histochemistry.

CP04. PRACTICALS OF PHYCOLOGY, BRYOLOGY, PTERIDOLOGY, GYMNOSPERMS, MYCOLOGY AND LICHENOLOGY, MICROBIOLOGY, PLANT PATHOLOGY, ANGIOSPERM TAXONOMY, ANGIOSPERM EMBRYOLOGY, PALYNOLOGY AND LAB TECHNIQUES. (0.5x10+1for lab techniques = 6 hours)

Phycology

1. Collection, preservation and preparation of algal herbarium (5 numbers).
2. Collection and study of the types mentioned below and their identification up to generic level using algal monographs:

Chlorophyta: Pediastrum, Scenedesmus, Hydrodictyon, Ulva, Cladophora, Pithophora, Bulbochaeta, Cephaleuros, Draparnaldiopsis, Bryopsis, Codium, Caulerpa, Halimeda, Desmids (Closterium, Cosmarium), Nitella.

Xanthophyta: Botrydium.

Bacillariophyta: Biddulphia, Coscinodiscus, Cymbella.

Phaeophyta: Ectocarpus, Dictyota, Padina, Turbinaria.

Rhodophyta: Batrachospermum, Gracilaria, Champia..

Bryology

Morphological and structural study of representative members of the following groups using whole mount preparations, dissections and transactions:

Asterella, Targionia, Cyathodium, Lunularia, Pallavicinia, Dumortiera, Porella, Anthoceros, Sphagnum and Bryum.

Pteridology

Study of vegetative and reproductive features of Lycopodium, Ophioglossum, Angiopteris, Osmunda, Lygodium, Ceratopteris, Pteris, Asplenium, Blechnum, Cyathea, Gleichenia, Trichomanes, Salvinia and Azolla.

Study of the following fossils: Rhynia, Lepidodendron, Sphenophyllum, Calamites, Calamostachys, Zygopteris and Anachoropteris.

Spore germination and development of prothallus in Knop's Agar medium.

A study of Pteridophytes in their natural habitats.

Gymnosperms

Identification of petrifications, compressions, impressions: Lyginopteris, Heterangium, Medullosa, Trignocarpus, Glossopteris, Caytonia, Pentaxylon and Cordaites.

Study of vegetative and reproductive structures of Zamia, Ginkgo, Pinus, Cryptomeria, Cupressus, Araucaria, Agathis, Podocarpus, Cephalotaxus, Ephedra and Gnetum.

Mycology

Critical study of the following types with the help of fresh/preserved materials by making suitable micropreparations giving emphasis on systematic position, details of vegetative and reproductive structures:

Stemonitis, Saprolegnia, Phytophthora, Albigo, Mucor, Pilobolus, Saccharomyces, Xylaria, Chaetomium, Peziza, Puccinia, Auricularia, Polyporus, Ganoderma, Lycoperdon, Dictyophora, Geastrum, Cyathus, Aspergillus, Curvularia, Alternaria, Fusarium, Colletotrichum, Parmelia, Usnea.

Microbiology

Test for the presence of coliform bacteria in contaminated water.

Isolation of Eubacteria and Cyanobacteria from soil by dilution plate method.

Isolation of pure bacterial culture by streak plate method.

Staining of bacteria (negative staining, Gram staining and spore staining).

Demonstration of bacterial motility by hanging drop method.

Morphological studies on Scytonema, Aphanocapsa, Spirulina, Oscillatoria, Anabaena.

Plant Pathology

Detailed lab study of the following diseases:

Bunchy top of banana, Bacterial blight of paddy, Bud rot of coconut, Mahali of Arecanut, Powdery mildew of rubber, Abnormal leaf fall of rubber, tikka disease of Ground nut, Late blight of potato, Blister blight of tea, wheat rust, coffee rust, grey leaf spot of coconut, Phytophthora foot rot of pepper, rhizome rot of ginger and turmeric, angiospermic parasites- Viscum and Dendrophoe.

Technique of isolation and pure culture of pathogens.

Angiosperm Anatomy

Study of anomalous secondary growth in roots and stems of Aristolochia, Strychnos, Amaranthaceae, Nyctaginaceae, Bignoniaceae and Agavaceae.

Nodal anatomy of different types.

Leaf anatomy: epidermal peels and TS of lamina.

Embryology

1. Study of anther development of Datura.

2. Preparation of dissected whole mounts of microsporangium.

3. Study of megaspore mother cell, megaspore and embryo sac.
4. Study of the receptivity of stigma and in situ germination of pollen.
5. Dissection of stages in the development of embryo and endosperm.
6. Pollen germination using hanging drop technique.
7. Demonstration of intra ovarian pollination.

Palynology

1. Analysis of honey for microscopic examination of pollen.
2. Calculation of percentage of viable pollen by using T Z test.
3. Study of pollen wall by acetolysis.

Lab Techniques

1. Measurement of microscopic objects - Micrometry.
2. Camera lucida drawing - calculation of magnification
3. Double stained permanent sections - free hand section, Microtome serial sections.
4. Preparation of whole mounts, macerations and smears.
5. Submission of 10 permanent slides - which should include microtome serial sections, free hand sections, macerations, whole mounts and smears.

Practical records:

Submission of certified record of practicals at the time of terminal evaluation.

Field work:

3 days of field work for the in situ study of the types of the above areas of study and submission of a field report.

CT 05. CELL BIOLOGY, MOLECULAR BIOLOGY AND BIOPHYSICS (2.5 + 2.5 + 1 = 6 hours per week)

Cell Biology

1. The nucleus. Interphase nucleus- Chromatin organization- nucleosomes, scaffold. Organization of eukaryotic chromosome. Heterochromatin- constitutive, facultative and condensed. Euchromatin. Satellite DNA. Chromosome banding and its significance.
2. Cell reproduction: Cell cycle. Specific events G₁, S, G₂ and M phases. Significance of G₀. Control of cell cycle. Significance. Gene expression during cell cycle. Mitotic Inducers.
3. Meiosis: types, synaptonemal complex, significance of meiosis. Genetic control and consequences of meiosis. Restriction points and check points. Cell cycle regulation of meiotic events- behaviour of sex chromosomes in meiosis- suppression of DNA replication between Meiosis I and II. Meiotic defects and human diseases.
4. Programmed cell death- necessity, classes, signals. Genetic analysis of cell death. Proteins regulating apoptosis. Pathways leading to cell death- significance. Aging- cellular and extracellular. Cell signaling.
5. Cell interactions-communication, recognition and adhesion. Application.
6. Cellular differentiation and specialization. General characteristics, intrinsic interactions- Nucleo-cytoplasmic. Extrinsic interactions. Molecular mechanisms of cellular differentiations.
7. Cancer- carcinogenic agents. Phenotype of the transformed cell. Genetic basis of malignant transformation- oncogenes. Tumour suppressor genes. Cancer and cell cycle. Metastasis. Interaction of cancer cells with normal cells.

Molecular Biology

1. Molecular biology of gene: Structure of DNA: Repetitive DNA; c-value paradox.
2. Replication of DNA: Enzymology of replication. Replication in prokaryotes and eukaryotes. Primosomes and replisomes. Telomerase and its function.
3. Gene expression: regulation of gene expression- Operon concept- Gene regulation in prokaryotes and eukaryotes- enhancers and silencers.
4. Protein synthesis: Transcription, post-transcriptional events. Introns and their significance. Translation. Post translational events. Role of chaperons.
5. Mutation: Spontaneous and induced. Physical and chemical mutagens. Molecular mechanism of mutation. Mutation and cancer. Mutator and antimutator genes. DNA repairing mechanisms.
6. Molecular evolution: The origin of genomes. Evolution of new genes. Origin of eukaryotic genomes. Phylogenetics. Application of molecular phylogenetics.

References

3. Snustad, Simmons and Jenkins. Principles of Genetics. John Wiley and Sons.
4. Weaver and Hendrick. Genetics. Wm. C. Brown Publishers.
5. Hawkins J.D. Gene Structure and Expression. Cambridge University Press.

Biophysics

1. pH and buffer solutions- hydrogen ion concentrations and pH, dissociation of acids and bases. Measurement of pH using organic indicator molecule and potentiometric method. Functions of buffers in a biological system. Use of buffers in biological and biochemical research. pH and life. Henderson and Hasselbalch equation.
2. Chromatography: Principles of chromatography. Types of chromatography (Brief account).
3. Electrophoresis: Electrophoretic mobility, principles, PAGE, Agarose gel electrophoresis. Separation and detection of macromolecules by electrophoresis. Electrophoretic apparatus, technique and procedure.
4. Centrifugation - Theory of centrifugation. Centrifuge- Types, Methodology of centrifugation, applications.
5. Colorimetry and spectrophotometry: Beer-Lamberts law. Measurement of extinction. Calorimeters and spectrophotometers. Techniques and applications in biological and biochemical research. Comparison between colorimetry and spectrophotometry.
6. Radiobiology: Autoradiography. principles, types. Methods and applications in biological research.
7. Immunochemistry: Immune response. Antigens- Antibodies. Histo-incompatibility antigens; Structure of IgG. Immunochemical assays-RIA, ELISA.
8. Cryobiology: Freeze drying (lyophilization)- applications.

CT06. CYTOGENETICS, GENETICS, BIOSTATISTICS, PLANT BREEDING AND EVOLUTION
(1+1.5+1.5+1+1= 6 hours)

Cytogenetics

1. Cytogenetics of aneuploids, euploids and structural heterozygotes: Effect of aneuploidy on phenotype. Transmission of monosomics and trisomics and their uses. Breeding behaviour and genetics of structural heterozygotes; translocation heterozygotes; Robertsonian translocation; B-A translocation. Karyotype-concepts and its importance. Structural chromosome aberrations- types and significance in evolution. Heteroploidy, aneuploidy, monosomy, trisomy (primary, secondary, tertiary and compensating). Nullisomy.

- Uses of aneuploidy in cytogenetics. Euploidy- autopolyploidy, allopolyploidy and segmental allopolyploidy diploidization. Role of aneuploidy and euploidy in evolution.
2. Molecular cytogenetics: Multigenic families and their evolution; in situ hybridization- concept. Computer assisted chromosome analysis, chromosome micro-dissection and micro-cloning; flow cytometry.
 3. Polytene and lampbrush chromosomes- cytogenetic importance.
 4. Supernumerary chromosomes: B-chromosomes.

Genetics

1. Relevance of Mendelism in modern genetics. A critical evaluation of Mendelism on the basis of modern concept of genes.
2. Linkage and gene mapping. Three- point test cross; linkage map; interference; tetrad analysis and centromere mapping. Linkage in humans. Pedigree analysis. Genetic recombination and mapping of genes in bacteria and bacteriophages.
3. Mobile genetic elements: Transposable elements in bacteria. IS elements. Tn elements. Cmp site transposon. Copia and P elements in Drosophila. Ac, DS and Mu elements in maize. Retrotransposons- Molecular characteristics and significance in development and evolution.
4. Extranuclear inheritance: Analysis of mitochondrial and chloroplast genomes and their utility. Cytoplasmic male sterility.
5. Quantitative genetics: Polygenic inheritance, heritability and its measurements. QTL mapping.
6. Population genetics: systems of mating. The Hardy-Weinberg principle. Estimation of gene frequencies. Factors affecting equilibrium: natural selection, mutation, migration and genetic drift.
7. Human genetics: Human pedigree analysis, Lod score for linkage testing. Karyotype; genetic disorders.

Biostatistics

1. The science of statistics and its applications in biological research.
2. Types and collection of data- Census; Sampling- theory and methods.
3. Tabulation and presentation of data- diagrammatic and graphic presentation.
4. Analysis of data- central tendencies.
5. Measures of dispersion - Range, quartile deviation, mean deviation, standard deviation and standard error. Relative measures of dispersion - coefficient of variation.
6. Tests of significance- formulation and testing of hypothesis- testing the probability of committing type 1 and type 2 errors. z test, t test, chi-square test.
7. Analysis of variance- one way classification and two way classification, F test, F value calculation, F table.
8. Correlation and Regression analysis- coefficient of correlation- significance testing. Rank correlation. Lines of regression- coefficient of regression.
9. Experimental designs- designing an experiment- CRD, RBD, LSD. Factorial experiments.
10. Probability- application of the principles of probability- theorems of probability- applications- Probability distributions- binomial, multinomial, normal and poisson distributions.
11. Statistical softwares- SPSS, SPAR, MINITAB.

Plant Breeding

1. Introduction and objectives.
2. Organizations involved in plant breeding.
3. Breeding systems in sexually propagated plants- Floral Biology and its significance in plant breeding. Sterility and incompatibility systems.
4. Genetic resources- centers of crop genetic diversity. In situ and ex situ conservation; cryopreservation of germplasm.
5. Conventional methods of plant breeding:
Domestication of wild plants- changes under domestication.
Plant introduction- history, types, principles, plant introduction agencies in India- rules and regulations. Major achievements.
Selection- selection methods in sexually and vegetatively propagated species. Selection in segregating populations. Major achievements.
Hybridization- history, objectives, techniques, consequences and major achievements.
Heterosis breeding- genetic basis of heterosis and inbreeding depression.
6. Modern methods of plant breeding:
Mutation breeding- history, methodology, applications, merits, demerits and achievements.
Polyploidy breeding- methodology, applications, merits, demerits and achievements.
Biotechnological approaches in plant breeding- Molecular markers and their uses- Transgenic plants- critical evaluation.

7. Breeding for special purposes: Resistance breeding- a brief account of disease resistance, pest resistance, stress resistance- achievements. Quality breeding- objectives and achievements.
8. Biometrical techniques in Plant Breeding- analysis of variability, heritability, genetic advance and combining ability.
9. IPR- Protection of plant variety and farmers' right act.

Evolution

1. The concept of evolution- evidences of evolution- geological time scale and evolution.
2. Origin of life- theories and experimental evidences.- chemical evolution and biological evolution.
3. Evidences of evolution.
4. Theories of evolution.- Pre-Darwinian, Darwinian and Post Darwinian theories.- Modern synthetic theory of evolution.
5. Reproductive isolation and the origin of species.
6. Evolution at the molecular level.

CT07. PLANT ECOLOGY, CONSERVATION BIOLOGY, PHYTOGEOGRAPHY AND FOREST BOTANY (2.5+1.5+1+1= 6 hours)

Plant Ecology & Conservation Biology

1. Habitat Ecology: Salient features of terrestrial (Biomes), fresh water (Limnology), wet land and marine habitats.
2. Productivity and Energy flow: Concepts, limits and process of primary production; methods of productivity measurements: global trends in primary productivity, energy flow models.
3. Population characteristics: density, natality, mortality, distribution, biotic potential, carrying capacity, aggregation and dispersal, ecotone and edge effect.
4. The environment and its pollution- types (land, air and water). Effect on living organisms. Control with emphasis on biological methods. Environmental hazards.
5. Threats to the global environment- green house effect, ozone depletion, El-Nino and La Nina effects.
6. Environment impact assessment (EIA) and assessment of environmental hazards- remote sensing.
7. Problems of conservation; causes of threat to environment- human interference, deforestation, habitat destruction, overexploitation of resources.
8. Identification of threatened plants; red list categories- extinct, endangered, vulnerable, rare and out of danger. Extinction process. Hot spots, keystone species and flagship species.
9. Strategies for conservation: in situ and ex situ conservation, biosphere reserve, national parks, wildlife sanctuaries. Gene banks, cryopreservation, seed banks.
10. Afforestation- social forestry, agroforestry. International biological programme (IBP), Man and biosphere programme (MAB), IUCN, world environment day, wild life preservation act (1972), Indian forest (conservation) act (1980) and United Nations Environment Programme. Environment Protection Acts.
11. Environmental awareness- role of government and NGOs.-Gaia hypothesis

12. Biodiversity- significance at Local, National and Global levels. Deep ecology (Paradigm shift from anthropocentric ecology to ecocentric ecology. National heritages.

CP08. PRACTICALS OF CELL BIOLOGY, MOLECULAR BIOLOGY, BIOPHYSICS, CYTOGENETICS, GENETICS, BIOSTATISTICS, PLANT BREEDING, PLANT ECOLOGY, CONSERVATION BIOLOGY, PHYTOGEOGRAPHY AND FOREST BOTANY. (0.5 + 0.5+ 0.5+ 0.5+ 1+ 1+ 0.5+0.5+0.5+0.25 + 0.25= 6 Hours)

Cell Biology

1. Study of Mitosis in root tip cells.
2. Pre-treatment of root tips with colchicine /hydroxy quinoline /paradichlorobenzene and study of chromosomes in Chlorophytum, / Zea mays/ Crotalaria/ Cyanotis.
3. Isolation of plastids and mitochondria.
4. Chromosome banding

Molecular Biology

1. Working out problems from molecular genetics.
2. Isolation of nucleic acid and identification of histones by SDS-PAGE.
3. Isolation of plant DNA and its quantification by spectrophotometric/ calorimetric method.
4. Immunological techniques: ELISA and Western Blot.

Biophysics

1. Preparation of buffers and measurement of pH using pH meter.
2. Determination of isoelectric pH.
3. Paper chromatography: Separation of sugars.
4. Thin layer chromatography- separation of amino acid mixtures.
5. Calorimetric and spectrophotometric estimation of proteins by Biuret / Lowry's method.
6. Estimation of amino acid by ninhydrin method (colorimetric).

Cytogenetics

1. Induction of polyploidy using colchicine; different methods of the application of colchicine.
2. Effect of induced and spontaneous polyploidy on plant phenotype, meiosis, pollen and seed fertility and fruit set.
3. Preparation of karyotype and ideogram of plant meristematic cells.
4. Cytological studies in callus tissues.
5. Study of meiosis in translocation heterozygotes (Rheo discolor)
6. Study of polytene chromosomes.

Genetics

1. Problems from linkage, tetrad analysis, quantitative genetics and population genetics.

Biostatistics

1. Problems from Mean, standard deviation, Coefficient of variation, tests of significance and correlation analysis and computer aided statistical analysis.

Plant Breeding

1. Study of floral morphology and flower structure in crop plants- rice, cashew, pulses, Solanum, Capsicum.
2. Practice of hybridization technique in self and cross pollinated plants mentioned in (2).
3. Biometrical techniques in Plant Breeding- analysis of variability.
4. Submission of certified report of visit to one plant breeding station in India

Ecology and Conservation biology

1. Determination of food chains and food web in aquatic ecosystem.
2. Determination of the minimum size of the quadrat suitable for an area using species area curve method.
3. Determination of the Importance Value Index (IVI) of plant species in the community by quadrat, line and belt transect methods.
4. Comparative study of polluted and non-polluted aquatic ecosystems.
5. Visit to a meteorological station, national park or wild life sanctuary, sewage treatment unit and major construction site.
6. Estimation of dissolved oxygen content in the water sample by Winkler's method.
7. Determination of primary production in water samples by light and dark bottle method (Winkler's method).
8. Determination of dissolved carbon dioxide content in water samples.
9. Determination of frequency of plant species of an area and heterogeneity of vegetation using transect method.

Phytogeography

1. Identification of the various floristic and vegetational regions of the world and India in maps.

Forest Botany

1. Study of the major and minor forest products of Kerala and their uses.

CT09. PLANT PHYSIOLOGY, METABOLISM AND BIOCHEMISTRY (2+ 2+ 2 = 6 hours)

Plant Physiology

1. Water and plant cells: Properties of water, hydrogen bonding, polarity, cohesion and adhesion. The concept of water potential. Water movements in cells and tissues. Soil-plant atmosphere continuum. Transpiration, stomatal movement, modern theories of stomatal mechanism. The ascent of xylem water and the up take of water by roots. Absorption of mineral ions- solute absorption.
2. Plants and nitrogen: The nitrogen cycle. Biological nitrogen fixation, symbiotic nitrogen fixation in leguminous plants. Biochemistry of nitrogen fixation. Export of fixed nitrogen from nodules. Genetics of nitrogen fixation. Nitrogen assimilation, assimilation of nitrate. Nitrogen nutrition -agricultural and ecological aspects. Biosynthesis of amino acids- reductive amination and transamination. GDH and GS/ GOGAT pathway.
3. Photosynthesis: Absorption and fate of light energy, absorption and action spectra. Photoreceptors- chlorophylls, carotenoids, phycobilins. Bioenergetics and the light dependent reactions of photosynthesis. Photosynthetic electron transport and photophosphorylation. The two pigment systems ,Z-scheme, water oxidizing clock. The photosynthetic carbon reduction cycle, C3, C2,C4 and CAM metabolism and ecological significance.
4. Translocation and distribution of photo assimilates. Phloem transport, Sources and sinks, mechanism of translocation. Phloem loading and unloading, distribution of assimilates. Translocation of xenobiotic chemicals.
5. Patterns in plant development: Growth, differentiation, and development . Genetic control and hormonal regulation of development. Seed germination- physiology of hormones in plant development- auxins, gibberellins, cytokinins, abscisic acid and ethylene. Role of vitamins and nutrients.
6. Photomorphogenesis: Phytochrome: chemistry and physiological effects. Mechanism of phytochrome and gene action. Cryptochromes and blue light effect.
7. Stress Physiology: Types of stress- water, temperature, salt, stresses caused by pests and pathogens and pollutants.

References

William G. Hopkins. Introduction to Plant Physiology. John Wiley & Sons Inc.

Metabolism

1. Enzymes: General aspect, classification, Michaelis-Menton equation and its significance. Mechanism of enzyme action, co-enzymes, inhibition, regulation, allosteric enzymes, covalently modulated enzymes. Kinetics of enzyme catalysis. Isoenzymes.
2. Intermediary metabolism: Anabolism, catabolism, amphibolic pathways and anapleurotic reactions. Link between primary metabolism and secondary metabolism. Bioenergetics and thermodynamics.
3. Catabolism of hexoses: Glycolysis- two phases, overall balance sheet, regulation; fate of pyruvate under aerobic and anaerobic conditions. Pentose phosphate pathway-multifunctional pathway (significance). Tricarboxylic acid cycle: Formation of acetate, reaction of citric acid cycle, anapleurotic reactions of citric acid cycle. Regulation of citric acid cycle. Glyoxylate cycle. Amphibolic nature of TCA cycle.
4. Oxidation of fatty acids. Activation and entry of fatty acids, Beta oxidation of saturated and unsaturated fatty acids. Regulation.
5. Oxidation of amino acids and entry to TCA cycle.
6. Oxidative phosphorylation: Electron transfer reactions in mitochondria. Electron carriers, multienzyme complexes, ATP synthesis. Regulation of oxidative phosphorylation. Shuttle systems- Alternate pathways - Thermogenesis.
7. Carbohydrate biosynthesis: Gluconeogenesis, biosynthesis of starch, glucose and other carbohydrates. Involvement of NDP- sugars. Regulation.
8. Lipid biosynthesis: Biosynthesis of fatty acids. Triacylglycerols, phospholipids and isoprenoids. Regulation.

9. Biosynthesis of nucleotides: PRPP and its significance. Purine and pyrimidine biosynthesis. Precursors and regulation. Conversion of NMP to NTP. Biosynthesis of deoxyribonucleotides.
10. Secondary metabolism: Main pathways and their relation to primary-metabolism.

CT10. ANGIOSPERM MORPHOLOGY, TAXONOMY AND PLANT RESOURCES (1+4+1=6 hours)

Morphology

1. A critical study of the current ideas on the origin of Angiosperms with special reference to their ancestral stock, time and place of origin.
2. The concept of primitive angiosperm flower. Origin and evolution of flower, co-evolution of flowers vis-a-vis pollinators.
3. Origin and evolution of structure and morphology of stamens, nectarines and nectar.
4. Origin and evolution of carpels: different types- concept of foliar origin of carpels; types of ovary; evolution of placentation types- inferior ovary- foliar and axial concepts.
5. Role of floral anatomy in interpreting the origin and evolution of flower and floral parts

6. Puri, V. Inferior ovary. Phytomorpholgy2:122.1952.
7. Sporne, K.R. The Morphology of Angiosperms. Hutchinsons Uni. Press, London. 1974.

Taxonomy

1. Principles of Taxonomy- Scope and importance of Taxonomy; systems of classification- artificial, natural and phylogenetic systems; phenetic versus phylogenetic systems; cladistics in taxonomy.

2. Conceptual basis of classification- essentialism, nominalism, empiricism, phenotics and cladistics. phylogenetic and alternative; concept of genus; concept of family; infraspecific categories.
3. Definitions and terms: primitive and advanced; homology and analogy; parallelism and convergence; monophyly and polyphyly.
4. Taxonomic hierarchy- concept of taxa- species, genus and family- infra specific categories.
5. Plant nomenclature: history of nomenclature; polynomial and binomial systems; detailed study of salient features and major provisions of the International Code of Botanical Nomenclature. Effective and valid publication, rank of taxa, rule of priority and its limitations, typification, author citation, rejection of names and names of hybrids. A brief account of International Code of Nomenclature of Cultivated Plants.
6. Concepts of character: definition, classification of characters- analytical and synthetic, qualitative and quantitative; unit and multiple, good and bad; correlation of characters; character weighting.
7. Modern trends in Taxonomy: cytotaxonomy, chemotaxonomy, biosystematics and numerical taxonomy. Molecular taxonomy- DNA bar coding in plants.
8. History and development of taxonomy in India. Classification of taxonomic literature- general indices, floras, icons, monographs, reviews-and journals; Herbarium- definition, steps involved in the development of herbarium- utility of herbarium and its maintenance- general account of regional and national herbaria with special reference to central National herbarium, Calcutta (CAL) and Madras Herbarium (MH). Botanical survey of India; Botanical gardens- types of gardens and importance of gardens in taxonomic studies- important national and international Botanical Gardens- Royal Botanical Garden, Kew; Indian Botanical Garden, Calcutta, National Botanical Garden, Lucknow, Tropical Botanic Garden, Trivandrum.

Plant Resources

1. A study of history, occurrence, morphology of useful part and overall chemical composition of the following:
 - a. Cereals & millets: rice, wheat, maize, sorghum, finger millet, pearl millet.
 - b. Pulses: Bengal gram, cluster bean, common bean, horse gram, cow pea.
 - c. Sugar yielding plants: sugar cane, beet root.
 - d. Starch yielding tubers: potato, tapioca, arrow root, yam, taro.
 - e. Fats & Oils: ground nut, coconut, castor, gingelly, mustard, oil palm.
 - f. Beverages: tea, coffee, cocoa.
 - g. Spices and Condiments: pepper, ginger, turmeric, coriander, cumin, fennel, fenu-greek, cardamom, nutmeg, cloves, cinnamon.
 - h. Fibre yielding plants: cotton, jute, coir.
 - i. Rubber yielding plants: pararubber.
 - j. Timber yielding plants: teak, rose wood, Artocarpus, Ailanthos, Xylia.

2. A study of the following medicinal plants with reference to the chemical and pharmacognosic properties: neem, turmeric, Adhatoda, Rauwolfia, Catharanthes, Bacopa, nux-vomica, sweet flag, Saraca, wood apple, Indian myrobalans, liquorice.

CT11. BIOTECHNOLOGY AND BIOINFORMATICS (3+3= 6 hours)

Biotechnology

A. Plant Tissue Culture

1. Basic concepts and history.
2. General account of laboratory facilities and management.
3. Media for in vitro culture, composition and their preparation.
4. Callus culture- selection of explants and medium- types of callus- growth profile of callus.
5. Cell culture - isolation of single cells- mechanical and enzymatic methods- measurement of growth of cells in suspension culture- viability tests.
6. Large scale cultivation of cells using bioreactors for secondary metabolite production.
7. Organogenesis- direct and indirect- factors affecting organogenesis.
8. Organ culture – apical/ axillary meristems, embryo, ovary, ovule, endosperm, anther, pollen and root cultures.
9. Applications of plant tissue culture - clonal propagation, somaclones, somatic hybrids, synthetic seeds, secondary metabolites, germplasm conservation –cryopreservation.

B. Genetic Engineering

1. Molecular analysis of gene and gene products: southern, northern and western blots- restriction maps- RAPD and RFLP. Chromosome walking and jumping. FISH. PCR and its applications. DNA finger printing. DNA chips.
2. DNA sequencing: Enzymatic methods. Gilbert and Maxam method. Messing's shot gun method. Fluorescent detection and automation. The Human Genome Project.
3. Recombinant DNA Technology- Enzymes, vectors, gene-cloning strategies, construction and screening of gene and cDNA Libraries. Expression of cloned genes in bacteria and mammalian cells. Prospects and achievements.
4. Transgenic plants. Gene cloning strategies in plants. Vector dependent and vector independent methods. Identification and selection of transformed plants; the reporter enzyme technology. Objectives and achievements- engineering for secondary metabolites; resistance against herbicides, pests, pathogens, stress - improved nutritional and status changes in plants. Plants as bioreactors; phytopolymers and biodegradable plastics; antisense RNA technology; transgene inactivation. Terminator and traitor technologies.

5. Cloning: objectives. Creation of transgenic animals- other developments in cloning. Human cloning. Ethics of cloning.
6. Patenting of genes and GMOs. Gene piracy. Ethics and biosafety aspects, recDNA safety; IPR, biosafety protocols.

Bioinformatics

A. Computer application.

1. .Computer in Science with special reference to biology, the scope and prospects.
2. Information super highway (Internet)- Information net works: Internet, World Wide Web. Web browsers, HTTP, HTML and URL.s. Biological networks.
3. Online publications with special reference to biology, -electronic journals, books, downloading and uploading.)- Open Archive Initiative (www.openarchives.org), biomedcentral, pubmedcentral, freedom of scientific information access, e-access debate- concepts and implications, Free Software Movement, Free Software Foundation, GNU/Linux, etc. Online archives, databases, the Public Library of Science (www.publiibraryofscience.org).

B. Bioinformatics

1. Introduction: Importance and scope.
2. Biological Databases
 - a. Nucleic acid databases: EMBL, GenBank- structure of GenBank entries. Specialized genomic resources, UniGene.
 - b. Protein sequence databases: PIR, SWISS-PROT, TrEMBL.
- Composite protein databases: NRDB, OWL.
- Secondary databases: PROSITE, PRINTS, BLOCKS, IDENTIFY.
- Structure classification databases- SCOP, CATH.
3. Database searching
 - a. Sequence database searching. EST searches. Different approaches to EST analysis. Merck/IMAGE, Incyte, TIGR. EST analytical tools. Sequence similarity, sequence assembly and sequence clustering.
 - b. Pair wise alignment technique: Comparison of sequences and sub-sequences. Identity and similarity. Substitution matrices, BLOSUM, DOTPLOT and BLAST.
 - c. Multiple alignment technique: Objective, Manual, simultaneous and progressive methods. Databases of multiple alignments. PSI-BLAST, CLUSTAL-W.
4. Protein structure Prediction:
 - a. Secondary structure prediction. Chou-Fasman, J Pred.
 - b. Tertiary structure prediction: Comparative modelling -Modeller, RasMol.
5. Emerging areas of Bioinformatics: DNA Microarrays, functional genomics, comparative genomics, pharmacogenomics, chemoinformatics, Medical informatics.

CP12. PRACTICALS OF PLANT PHYSIOLOGY, METABOLISM, BIOCHEMISTRY, ANGIOSPERM MORPHOLOGY, TAXONOMY, PLANT RESOURCES, BIOTECHNOLOGY AND BIOINFORMATICS (1+1+1+0.5+1+0.5+0.5+0.5= 6)

Plant Physiology

1. Determination of water potential by tissue weight change method.
2. Extraction of leaf pigments and preparation of absorption spectra of chlorophylls and carotenoids.
3. Demonstration of Hill reaction.
4. Separation of leaf pigments by paper chromatography and column chromatography.
5. Effects of light intensity on photosynthesis by Wilmot's bubbler.
6. Determination of sugars and amino acids in germinating seed by TLC.
7. Extraction of seed proteins based on solubility.
8. Biochemical analyses of leakages from seeds during germination.
9. Analyses of proline in water stressed plants.
10. Testing of seed viability by NBT test.
11. Changes in the reserve proteins during germination.

Metabolism

1. Extraction of enzyme: Any enzyme.
2. Effect of substrate on enzyme and determination of its K_m value.
3. pH dependent activity profile of enzymes.
4. Ammonium sulphate precipitation of enzymes.
5. Desalting of proteins by gel filtration using Sephadex G25/ dialysis
6. Separation of isoenzymes by native PAGE.
7. Determination of enzyme / protein sub units by SDS PAGE.
8. Metabolism of germinating seeds - changes in metabolisable carbohydrates.

Biochemistry

1. Qualitative tests for monosaccharides, reducing and non reducing oligosaccharides, starch, amino acids and protein.
2. Quantitative estimation of reducing sugars and starch.
3. Qualitative tests for lipids. Emulsification, saponification, acrolein test, Boundouin's test.
4. Quantitative estimation of amino acids.
5. Quantitative estimation of protein by Biuret / Branford's /Lowry et al method.
6. Quantitative estimation of DNA and RNA (colorimetric / spectrophotometric)
7. Quantitative estimation of total phenolics.

Morphology

1. Preparation of cleared whole mounts of floral parts to show vasculature.
2. Examination of the following with the help of dissections and hand sections: Transmitting tissues/canals in style and stigma; Different types of ovaries; Different types of placentation, vasculature of androecium and gynoecium in special types of flowers.

Taxonomy

1. Familiarization with local flora and construction of keys – use of floras in identification up to species.
2. Study of diagnostic features of the families studied in the theory paper with special reference to their economic aspects. 9. Study of the following families with special reference to morphology of modified parts, economic importance, interrelationships and evolutionary trends: Magnoliaceae, Ranunculaceae, Menispermaceae, Nymphaeace, Polygalaceae, Caryophyllaceae, Clusiaceae, Sterculiaceae, Meliaceae, Sapindaceae, Rosaceae, Melastomaceae, Rhizophoraceae, Aizoaceae, Rubiaceae, Sapotaceae, Gentianaceae, Boraginaceae, Convolvulaceae, Scrophulariaceae, Pedaliaceae, Verbenaceae, Nyctaginaceae,

Euphorbiaceae, Urticaceae, Casuarinaceae, Orchidaceae, Zingiberaceae, Amaryllidaceae, Commelinaceae, Araceae, Cyperaceae and Poaceae.

3. Dissection of at least two members of each family in the laboratory, making suitable sketches, describing them in technical terms and identifying them constructing appropriate floral diagrams.

4. Field study of five days under the guidance and supervision of teachers at an ecologically different locality and submission of a field study report certified by the teacher concerned. The report should contain ecology of flora of the area studied. Each student shall collect plant specimens following the standard means of plant collection for preparation of herbarium. Each student shall submit a minimum of 50 such herbarium specimens along with the field book for the Practical examination.

5. Problems in Bar Coding

Plant Resources

1. Morphological study of the source plants mentioned in the theory syllabus and identification of the plants and plant products.

Biotechnology- A. Tissue Culture.

1. Preparation and sterilization of culture media.

2. Culturing of Carrot /Tobacco/Datura.

3. Estimation of cell growth in callus culture by fresh wt. and dry wt.

4. Induction of multiple shoots using axillary and apical meristems as explants.

5. Plantlet regeneration from callus.

6. Identification of secondary metabolites in cultures.

Biotechnology- B. Genetic Engineering

Isolation of DNA.

Bioinformatics- A. Computer Application

1. Acquiring basic computer operation and internet browsing skills in Windows and Linux platforms.

2. Acquiring basic word processing/ data entry skills using popular (both commercial and open source) packages such as MS-Word, K-Word, Open Word, PageMaker.

3. Acquire graphic processing skills using popular packages such as PhotoShop, Corel Draw, Chem Draw.

4. Preparation of scientific presentations using packages such as MS-PowerPoint.

5. Use of statistical packages such as SPSS, Biostat, Origin, MS-Excel.

B. Bioinformatics

1. Acquisition of basic skills in Internet browsing

2. Use of web browsers and search engines.

3. Use of biological and bioinformatic websites Agris, Agricola, BIOSIS, CABWeb.

4. Visit to Bioinformatics websites: NCBI, SWISS PROT, PIR, PDB.

Model Question Paper: Theory
I Semester M.Sc. Degree Examination (CSS)
BOTANY

BO 01 CT 01. Phycology, Bryology, Pteridology and Gymnosperms

Time: Three hours

Max: 36 weightage

I. Answer the questions very briefly (weightage: 1x14=14; grades: A, B, C, D, E)

1. Bring out the major criteria for algal classification.
2. Write a brief account on phytoplanktons.
3. What are pyrenoids?
4. Comment on the role of algae in soil fertility.
5. Why are bryophytes called the amphibians of the plant kingdom?
6. Write an account on the sporophyte diversity in bryophytes.
7. Write a note on the economic importance of bryophytes.
8. Comment on the status of pteridophytes as first vascular plants.
9. Describe apogamy.
10. Draw and describe Rhynia.
11. Write a note on aquatic ferns.
12. Bring out the economic importance of gymnosperms.
13. What are living fossils?
14. Comment on the anatomy of gnetales.

II. Answer any seven questions in not more than 100 words. (weightage: 2x7=14; grades: A, B, C, D, E)

15. Give an account of algal cell structure.
16. Compare different types of life cycle in algae.
17. Compare the thallus structure in chlorophyta and xanthophyta.
18. Give a general account of fossil bryophytes.
19. Compare the anatomy of Marchantiales with that of Anthocerotales.
20. Write a note on the cytology of pteridophytes.
21. Comment on the evolution of gametophytes in pteridophytes.
22. Bring out the economic importance of pteridophytes.
23. Give an account of the major gymnosperm groups in relation to geological time scale.
24. Bring out the anatomical evolution in gymnosperms.

III. Answer any two questions in 300 words each (weightage: 4x2=8; grades: A, B, C, D, E)

25. Write an essay on the evolutionary differentiation of algal thallus with the help of diagrams.
26. Bring out the evolution of sporophyte in the case of bryophytes. Draw diagrams wherever necessary.
27. Pteridophytes are vascular cryptogams. Write an essay on the evolution of stele in the group.
28. Discuss the significance of gymnosperms in relation to heterospory and seed habit.

Model Question Paper: Practicals
M.Sc. Degree Examination (CSS)
BOTANY

Name of the course:

Time: Six hours

Max: 36 weightages

Part A: Major experiments (2 x 10 = 20 weightages (grades: A, B, C, D, E))

- I. Dissection/ Experiment/ Problem A.
- II. Dissection/ Experiment/ Problem B.
- III. Dissection/ Experiment/ Problem C.
- IV. Dissection/ Experiment/ Problem D.
- V. Dissection/ Experiment/ Problem E.
- VI. Dissection/ Experiment/ Problem F.
- VII. Dissection/ Experiment/ Problem G.
- VIII. Dissection/ Experiment/ Problem H.
- IX. Dissection/ Experiment/ Problem I.
- X. Dissection/ Experiment/ Problem J.

Part B: Critical notes/ minor experiments (1 x 10 = 10 weightages (grades: A, B, C, D, E))

- XI. Write critical notes/ comment on the minor experiments set up: K, L, M, N, O, P, Q, R, S, T.

Part C: Practical records. (4 x 1 = 4 weightages (grades: A, B, C, D, E))

- XII. Submit the practical record of the semester for valuation.

Part D: Submissions/ Tour report (2 x 1 = 2 weightages (grades: A, B, C, D, E))

- XIII. Submit the submissions and/or tour report for valuation.
